Ewes	
2-3 wks pre-partum	4-5
At lambing	4-5

Lambs	
At birth	2-3
At weaning	2-3
Finishing lambs	3-4

**DIRECTIONS:** Natural vitamin A (carotenes), and tocopherols can be destroyed in feedstuffs through processing, ensiling and storage. Due to these losses, reduced intakes of fat-soluble vitamins can occur in animals maintained in continual confinement compared to animals allowed to graze lush pasture. Intramuscular or subcutaneous injections offer an efficient and rapid method to increase the vitamin A, vitamin D and vitamin E status of animals.

**INDICATIONS:** Vitamin E-AD Injectable d-alpha-tocopherol with AD is a clear, sterile water emulsifiable solution of vitamin A, vitamin D<sub>3</sub>, and vitamin E. This product is intended for use as an aid in the prevention and treatment of vitamin E deficiencies in swine, cattle and sheep. This product is intended intended as a supplemental source of vitamins A, D, and E.

**EACH mL CONTAINS:** 300 IU's of vitamin E (as d-alpha-tocopherol, a natural source of vitamin E); 100,000 IU's vitamin A Propionate; 10,000 IU's vitamin D<sub>3</sub>; compounded with 2% benzyl alcohol (preservative) in a water emulsifiable base.

**CAUTION:** Do not exceed recommended dosage. Occasionally, reactions of an anaphylactic or allergic nature may occur. Should such reactions occur, treat immediately with injection of epinephrine or antihistamines. Administration of the product to well nourished animals may cause hypervitaminosis D which may result in hypercalcemia.

**WARNING:** Do not add water to solution.

**STORAGE:** Store between 2° - 30°C (36°-86°F) in a dark place.
