

NEW

ARBOCEL® R

for the quick and effective drying
of newly farrowed piglets

Benefits of ARBOCEL® R

- quick & complete drying ●
- no "battered" piglets ●
- highly-absorbent ●
- time-saving ●
- very cost efficient ●

ARBOCEL® R

for drying piglets at birth

NEW

Further advantages of ARBOCEL® R

- smooth to the skin
- hygienic
- no residue
- natural - without additives

Benefits of drying massage

- vitalising effect and better blood circulation
- better breathing - removing of amniotic fluids
- prevents the drop of body temperature
- faster and longer absorption of colostrum

ARBOCEL® R for drying newly farrowed piglets

ARBOCEL® R consists of extremely fine-grinded, soft and fibrillated lignocellulose fibres characterized by a very high water-binding capacity up to 800 %.

On the strength of these qualities **ARBOCEL® R** offers all physiological benefits of a drying powder, i.e. absorbing and binding the amniotic fluids of the newborn piglets completely within a few seconds (approx. 20 sec. per piglet). Considering the use of comparable products, much more time is needed (1-2 min.) to reach the same level of dryness of the piglets.

The vitalising effect of the drying massage with **ARBOCEL® R** and the release of the respiratory tract from amniotic fluids will simplify the farrowed piglets' start into a new life and therefore helps to minimize the rate of pre-weaning mortality: The loss of energy after birth is reduced significantly - piglets start suckling earlier and absorb more colostrum.

How to use ARBOCEL® R?

Immediately after birth dip piglets into a bucket of **ARBOCEL® R** - rub the whole body with **ARBOCEL® R**.

Packaging: bags à 20 kg
