

SWINE BLUELITE®

by TechMix

The original acidified water soluble hydration product for pigs.

Preparing for dehydration stress events ensures that pigs will receive the critical nutrients and hydration necessary to achieve both pig health and profitability. Use Swine BlueLite to provide additional energy, electrolytes, and acidification. For over 25 years, Swine BlueLite has been proven to help lower gut pH, to reduce problems of dehydration-shrink, and is an effective rehydration product for swine of any age.

KEY FUNCTIONAL COMPONENTS: Acidification, Electrolytes, Energy

FEATURES & BENEFITS

- Easy to administer and extremely palatable
- Well-known product with proven results
- Provides multiple energy sources
- An acidified electrolyte that combines energy sources specifically designed to combat losses in swine due to shrink or dehydration
- Acidification helps to lower gut pH, acting as a bacteria inhibitor

QUICK REFERENCE

- Helps to encourage consistent water intake, maintain adequate hydration, and stimulate feed intake during times of stress
- Specifically formulated to provide critical nutrients
- Cuts losses of body shrink/dehydration for stresses of weaning, sorting and handling
- Helps to maintain fluid intake when unpleasant tasting water supplements are added to the drinking water
- First choice for early weaning, starter pigs, and pigs of any age

WHEN TO USE

- Following shipment or movement
- During extreme weather conditions
- To provide added energy
- To reduce water pH
- At weaning
- For nursing or newly weaned pigs to help mask unpleasant taste of medicants
- After scours

DIRECTIONS FOR USE

Water Administration:

Use Swine BlueLite in the drinking water one of the following three ways when pigs appear dehydrated from environmental or management stress such as hot weather, weaning, transportation, handling and/or sorting. Give product for 5-7 days or until pigs are consuming their normal amount of feed.

1. Mix one ounce (3 tablespoons) of Swine BlueLite product per 4 gallons of drinking water.
2. Mix one pound (2 1/2 cups) of Swine BlueLite product per 64 gallons of drinking water.
3. Mix 2 pounds (5 cups) of Swine BlueLite product per gallon of stock solution. Provide 1 ounce of stock solution to each gallon (128 ounces) of drinking water.

Feed Mixing:

Mix 6 pounds (2.72 kg) of Swine BlueLite to each ton of complete swine feed. Use Swine BlueLite in the feed for 5-7 days or until pigs are consuming their normal amount of feed.
